

Innovative, Diverse Research for a Positive Impact on the Field

The AABB Foundation Early-Career Scientific Research Grants Program is advancing the careers of early-stage researchers working throughout the field. For over 40 years, the AABB

Foundation has provided nearly \$11 million in early-stage research grants, ultimately advancing treatments across many disciplines including pediatrics, oncology, cardiology and transplantation.

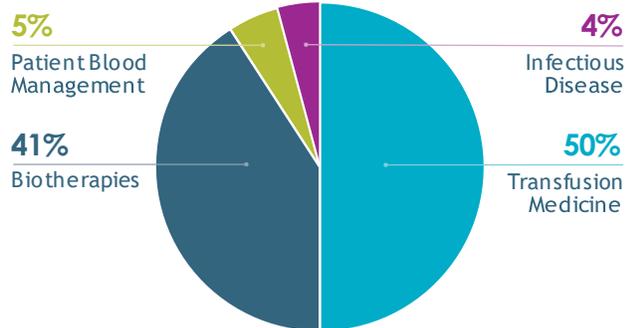

AABB's vision, mission, purpose and core values are dependent on the diversity of our global community, which values equity, inclusion and access for all. The impact of research grants

provided by the AABB Foundation is greater due to the diversity of research it is funding. Ensuring that researchers working throughout the world, from all backgrounds and in a variety of facilities and focusing on different research areas, allows our grants to broadly benefit society.

As of today, AABB has members in more than 80 countries and continues working towards innovating the field by supporting advancements in donor and patient care. With exciting things on the horizon, the continuous support and growth of the grants program is essential to the global impact of the AABB Foundation.

Grant Recipients by Topic

2009–2022

The AABB Foundation grant provided critical support during my early career, which was essential for establishing my research laboratory and translational program to improve transfusion therapy for patients with sickle cell disease. — *Stella T. Chou, MD*

Apply Today

Join more than 200 AABB Foundation grant recipients whose groundbreaking research and contributions led to successful, scientific research careers.

Research Content Areas Include:

Immunology	Infectious Diseases
Hematology	Biotherapies
Immunohematology	Patient Blood Management

Funding from the AABB Foundation was crucial for my path to becoming an independent investigator. — *Richard O. Francis, M.D., Ph.D.*

\$11+ Million

Awarded to early-career investigators
