Subject: Glycerolyte 4A7833F Shelf Expiration Dating Extension Update

Dear Valued Customer,

Fresenius Kabi would like to provide an update on Glycerolyte Part Number 4A7833F expiration dating extension efforts. We are conducting an assessment to determine if the expiration date can be extended from 18 months to 24 months. This expiration date extension would apply to products currently in customer inventory and any new shipments. We anticipate having the results by the end of November.

Please do not dispose of any Glycerolyte product that is approaching expiration, as the assessment may support extending your batch's expiration date by six months. Fresenius Kabi will provide an update when the results are available.

Fresenius Kabi recommends that customers follow all applicable SOPs, regulations, standards, and guidance when adopting any product, software, or device. Always consult the device operator's manual and the instructions for use for the applicable kit codes.

If you have any questions or require additional information, please contact your local Account Executive or Clinician.

Regards,

Laura A. Kelly
Senior Director Marketing
